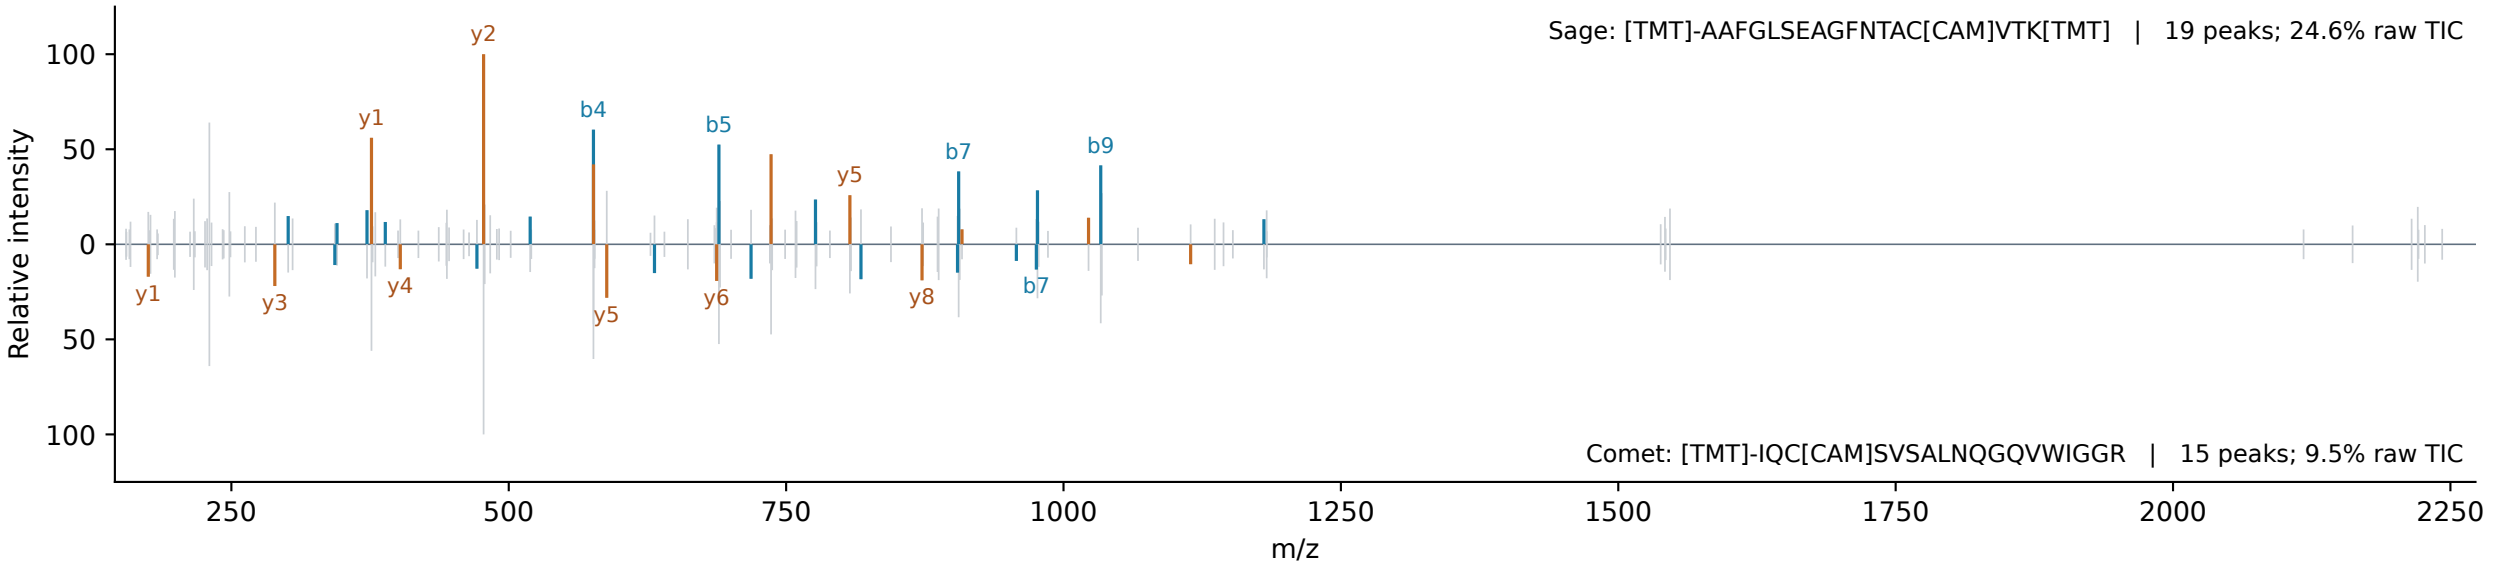
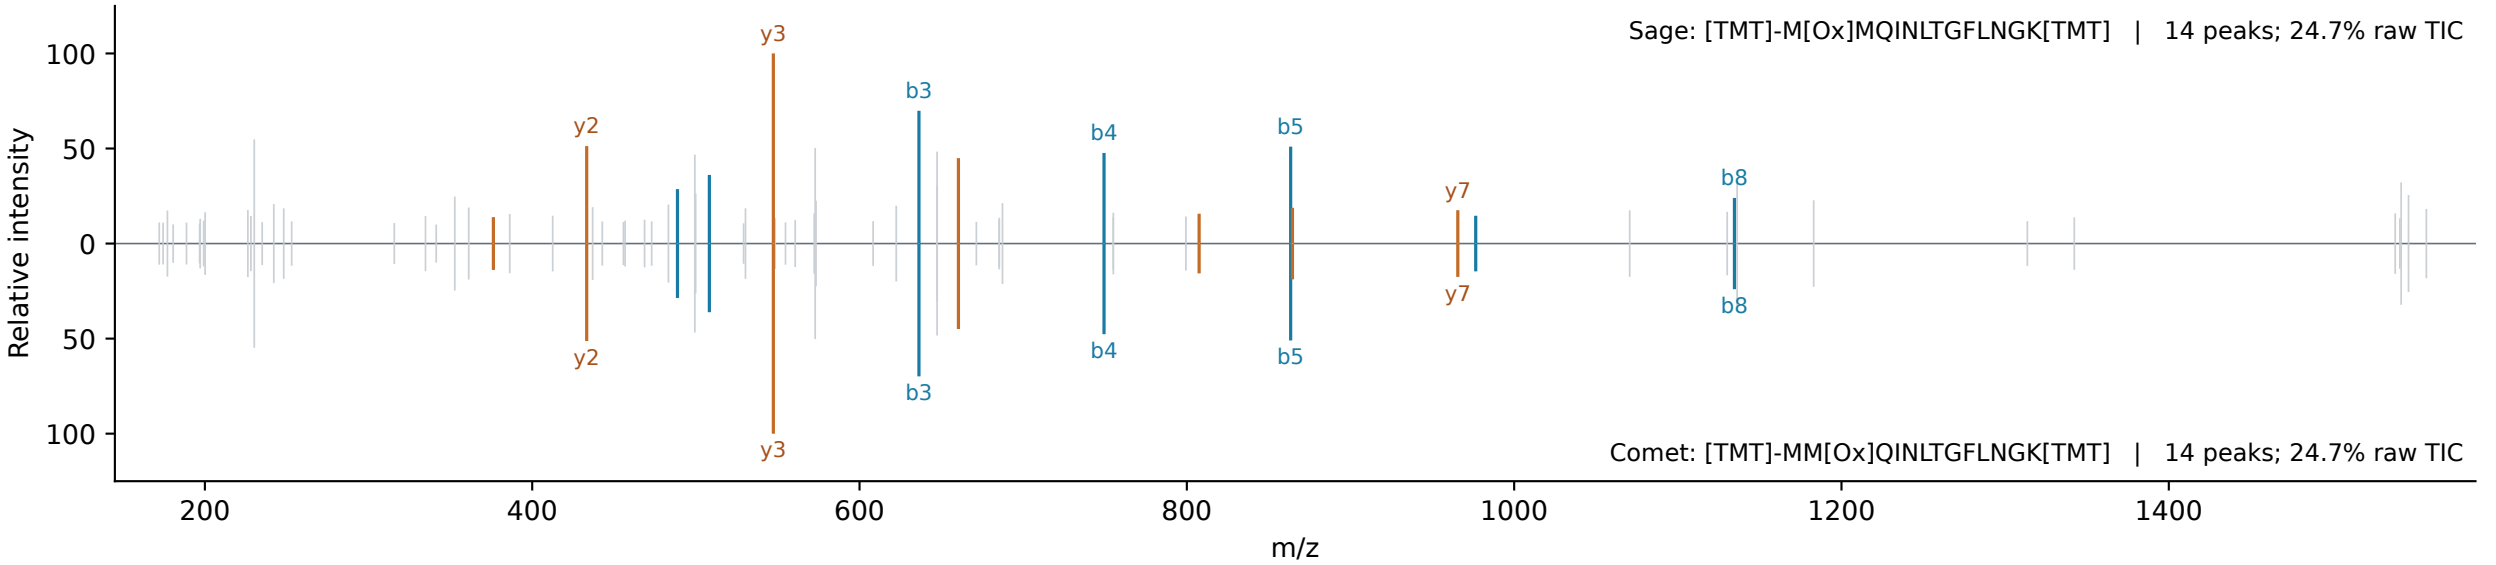
Reference identifications are evidence, not infallible truth

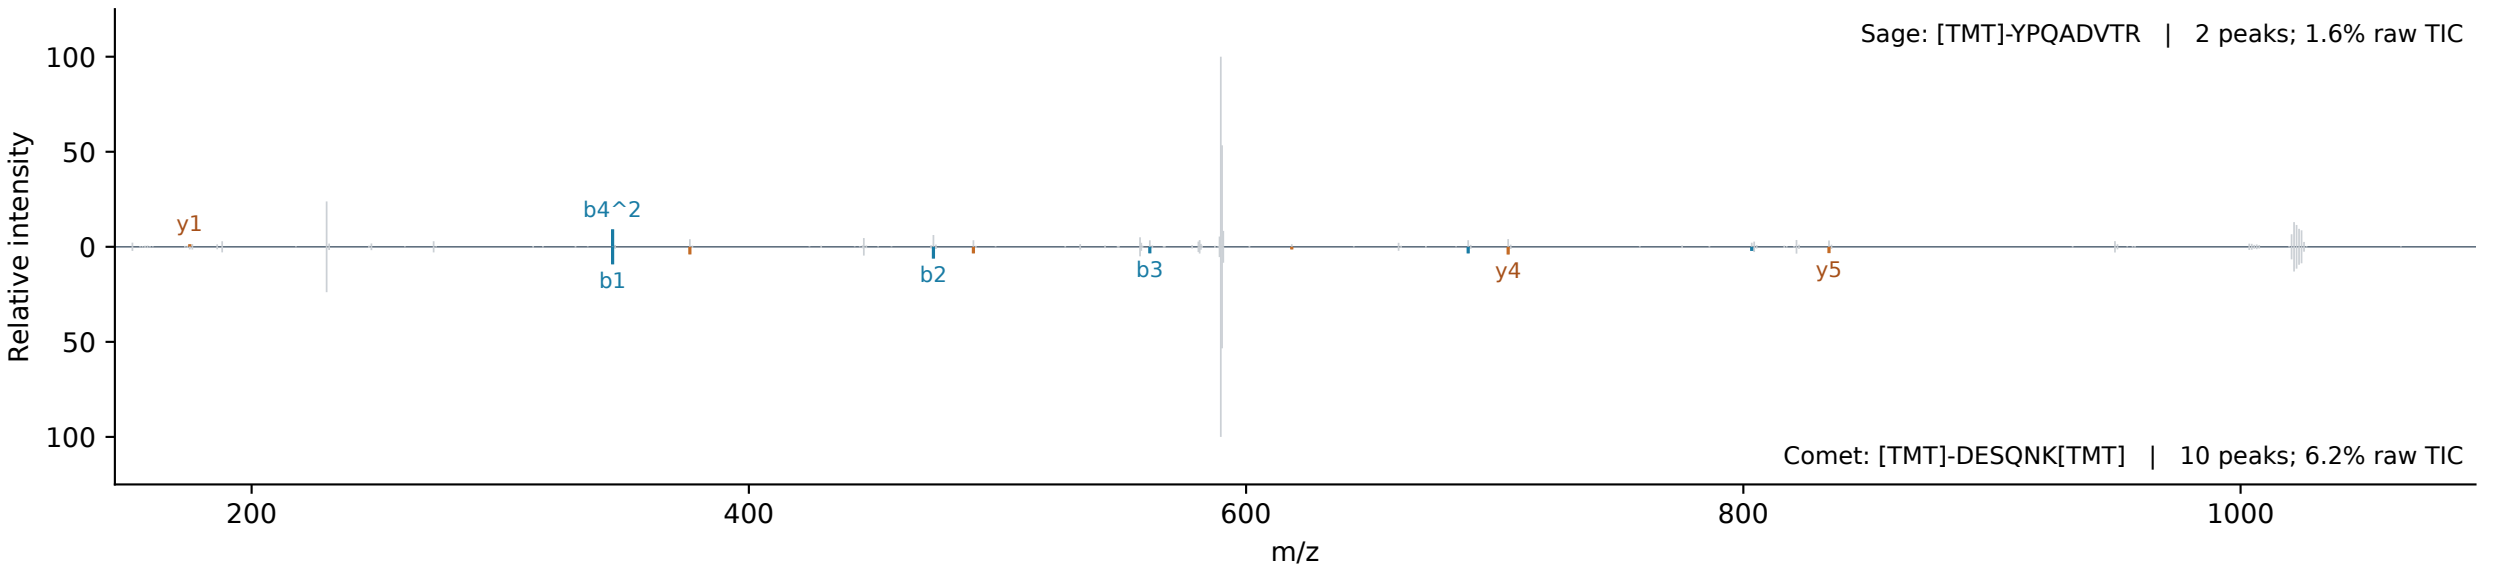
A. PXD037999 · scan=49759 — Fragment evidence favors the reference



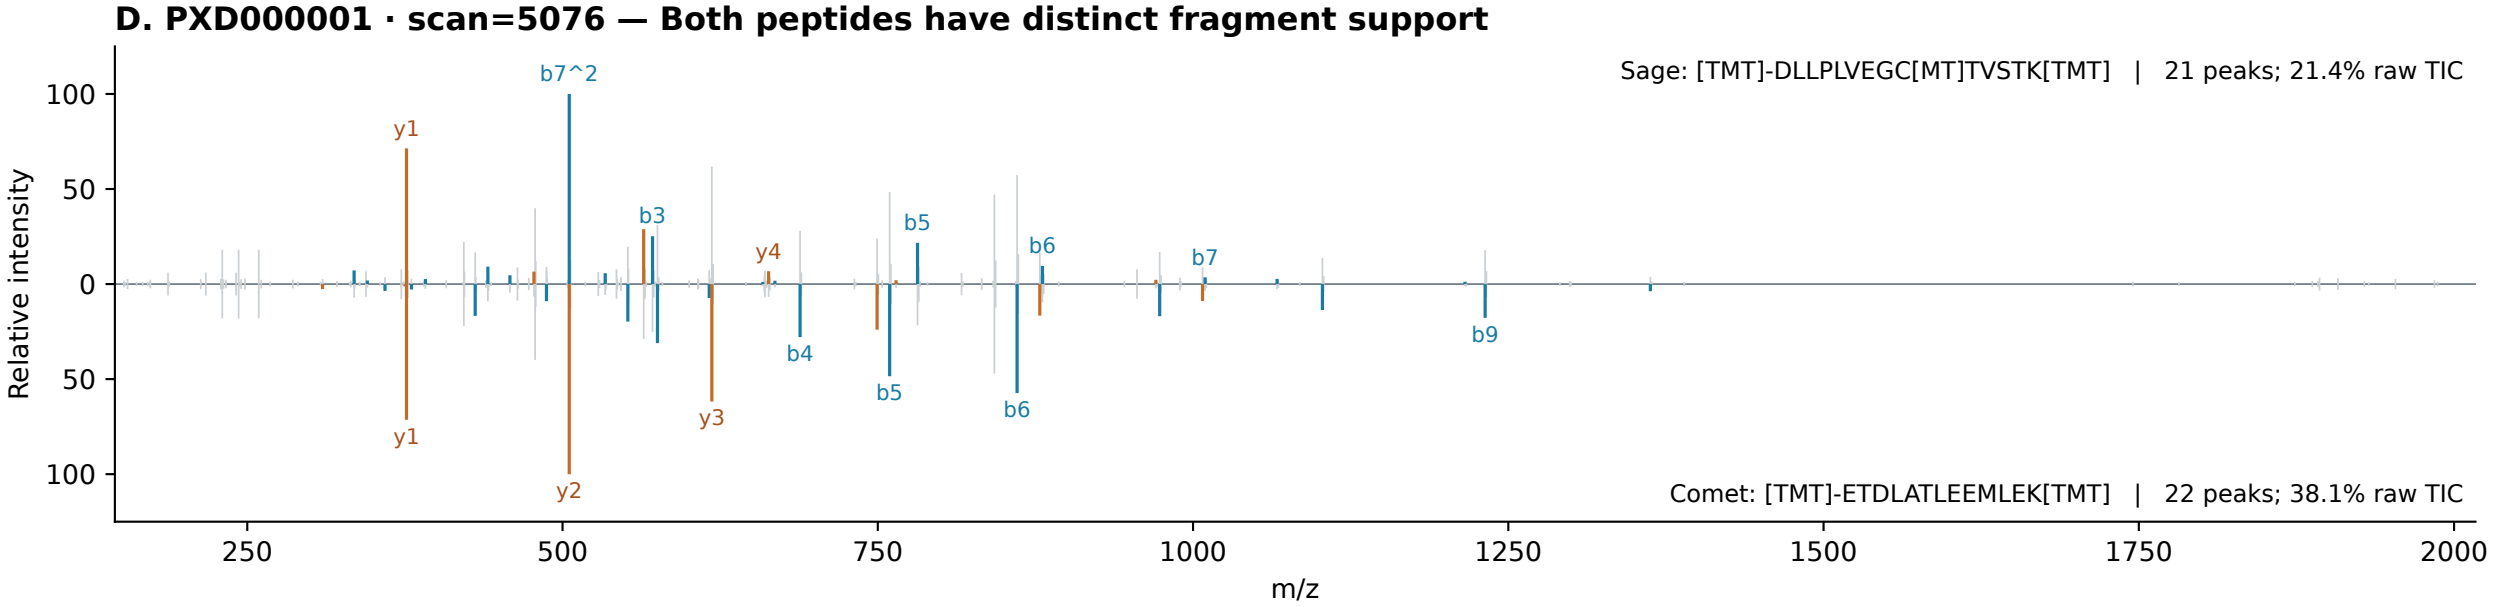
B. PXD037999 · scan=55112 — Oxidation site is unresolved



C. PXD000001 · scan=1273 — Reference assignment is questionable



D. PXD000001 · scan=5076 — Both peptides have distinct fragment support



Each mirror uses the same raw spectrum. Blue: b ions; orange: y ions; gray: unmatched.
20 ppm; charges 1–2; m/z <150 hidden; TIC percentages use the full raw spectrum. MT: methylthio; Ox: oxidation; CAM: carbamidomethyl.
